Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-3, 8-10, 11, 12, 17-20, 21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hiratsuka.

Hiratsuka discloses an electrical device comprising: an enclosure 10 of length L; a first end wall disposed at a first end of said enclosure and a second end wall disposed at a second end of said enclosure; an air permeable air intake port 15 in the first end wall; an air permeable air exhaust port 16 in said second end wall; an air flow generator 25 disposed within said enclosure at least a distance L/5 from said air intake port and said air exhaust port, wherein said first end wall and said second end wall define a longitudinal axis of said enclosure; a first electrical circuit 11 or 13 disposed in said enclosure between said air intake port and said air flow generator 25; a second electrical circuit 12 or 14 disposed in said enclosure between said air exhaust port and said air flow generator 25. Hiratsuka discloses the claimed invention except a power supply and its function as appears to be of inherited feature of an ordinary power supply and it has been held that a recitation with respect to the manner in which a claimed apparatus is intended to be employed does not differentiate the claimed apparatus from a prior art apparatus satisfying the claimed structural limitations. *Ex parte Masham*, 2

USPQ2d 1647 (1987). The method steps of claims 11 and 21 are necessitated by the device structure as disclosed by Hiratsuka.

Allowable Subject Matter

3. Claims 4-7, 13-16 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
